POSiPayments: Powered by Shift4

The Industry's Most Secure Payment Processing Solution

THE HIGHEST LEVEL OF DATA SECURITY

The Shift4 gateway offers the highest level of transaction and financial data security, including certified compliance with the Payment Card Industry Data Security Standard (PCI DSS). We have powerful tools in place to ensure that our merchant's transaction processing systems do not store or process sensitive payment card data, providing the highest level of data security available.

TOKENIZATION

Shift4 tokenization replaces sensitive cardholder data with a random alphanumeric value, delivering the best solution for merchants who want to protect their sensitive data. Shift4 actually invented tokenization in 2005 and has processed billions of tokenized transactions since then.

POINT-TO-POINT ENCRYPTION (P2PE)

Shift4's PCI-validated P2PE solution prevents cardholder data from entering your payment environment – protecting your business and customers from the harmful and costly effects of a data breach. Many companies claim Point-to-Point Encryption but few are PCI validated and that makes the whole difference.

THE BEST-IN-CLASS PAYMENT GATEWAY

FUNCTIONALITY

Our gateway offers a complete enterprise solution, including credit, PIN debit, gift cards, signature capture, check verification, and EMV, all in one simple-to-use tool. The gateway is also a comprehensive accounting application that supports pre- and post- settlement auditing, batch settlements, and a 24-month archive of all transactions to help merchants simplify the accounting processes and prevent against costly chargebacks.

RELIABILITY

Shift4 has had 100% system uptime since 2008 with fully redundant, geographically diverse data centers (hot, hot) powering our robust processing infrastructure. From hardware devices and data centers to processor connections and Internet Service Providers, everything is redundant – right down to the cooling systems that regulate the data centers. There is no single point of failure in our entire infrastructure.

ENTERPRISE MANAGEMENT

Our gateway provides centralized control so authorized managers can view, edit, and report on transactions that relate to their specific location, while corporate headquarters can access, manage, and audit transactions from across the enterprise. Franchisees have the same control, over their business whether they have one franchise or one hundred.

REPORTING

Our comprehensive accounting and reporting capabilities allow you to search, filter, and create custom reports for up to 24 months of transaction data. Generate full reports for any merchant in your enterprise, locate and retrieve the details of a specific transaction to defend against chargebacks, and quickly resolve customer inquiries.

SPEED

The industry's fastest authorizations and settlements enable you to eliminate long lines and slow checkouts that can lead to customer dissatisfaction and potential lost business.
