

ADVANCED PROMOTIONS

THE SUITE

Store Management Suite (SMS) is a client-based software solution that provides regional and national retailers with seamless, integrated management of the back office, corporate office, warehouse and all aspects of the retail enterprise. The suite contains modules that are typically outsourced, and ensures all necessary data is shared when, how, and with whom needs it. Instant connectivity, anywhere in the enterprise, on any connected device, is reality.

THE OFFER

The combination of SMS POS, customer file, loyalty and coupon engines provides retailers with the most complete, most adaptable, most sophisticated promotions toolset in the industry, without exception.

The process of retailing may start with a transaction, but the true art begins well before that. Creating the spark, or gratification, can take many forms, and that's where data can truly help a retailer find those optimal approaches. SMS offers industry leading customer engagement, capable of anonymous, card based, even targeted offers, creating the will to purchase, and instigating the entire process.

Like every other aspect of retail technology, successful promotions require a sophisticated engine - one capable of delivering much more than cents off or percentage discounts. Successful retailers understand purchasing patterns, or perhaps lack thereof. That knowledge is then translated into a meaningful resource that influences behavior and is delivered through a medium that makes the most sense for the targeted prospect, customer or group.

Understand. Deliver. Thrive. That's modern retailing. That's SMS.
