LOC SUITE

THE SUITE

LOC SUITE is the next-generation solution from LOC Software designed to make transactions more manageable, profitable, and frequent for regional and national grocery retailers. The new design delivers role-driven applications capable of serving stores, web, and mobile - unifying front end, back office, headquarters, personnel, and customers - all seamlessly accessing data wherever and whenever it's needed, from any device.

THE TECHNOLOGY

LOC SUITE is the premier, fully connected platform bridging all aspects of the retail enterprise - linking stores, customers, and data to decision-makers. eSuite expands upon foundational elements of SMS - like robust data schema around a single core - the same ingredients that make it #1 with independent grocers. Our architecture continues to provide undeniable reliability, a robust fully configurable feature set, and

speed. Similarly, eSuite continues a legacy of ensuring customization that has never been easier, proving more stable.

Likewise, enterprises can fully utilize a centralized, multi-tenant database architecture, with zero-install thin clients and zero access rights installations. eSuite is fully compatible with legacy LOC SMS, allowing more progressive adoption rates as needed. Plus, the enhanced client-server architecture is fully capable of hosting clients in any browser remotely via Windows services.

LOC Suite also introduces a new HTML5 based user interface, improving flow, simplicity, and speed. The new UI draws upon three generations of design and is a perfect fit for desktops and tablets alike with its fully responsive design. The UI has been developed in HTML5, which makes it 100% customizable - in any of the suite's modules.
